

BREAKTHROUGH SOLUTIONS FOR JAWLINE, LOWER FACE + NECK

ELLACOR + VOLUX

Juvéderm® Volux™ XC

The first and only hyaluronic acid (HA) filler to receive U.S. FDA approval for improving jawline definition

"JUVÉDERM® VOLUX™ XC complements our existing product line to create an improved jawline that appears more defined in real life and on camera. JUVÉDERM® VOLUX™ XC is what our providers have been asking for to deliver the jaw-dropping results their patients are seeking," said Carrie Strom, President, Global Allergan Aesthetics.

"Patients who request jawline treatment vary in age, gender, race, and ethnicity. Younger patients may want more definition of their jawline. As people age, there is reduced definition around the jawline area that may impact and change the shape of the face and lead to the appearance of jowls," says Dr. Saluja, "I am excited to now be able to offer this treatment option to my patients seeking an improved and defined jawline."

Commonly reported side effects in the clinical study included tenderness, lumps/bumps, pain, swelling, firmness, bruising, redness, itching, and discoloration at the injection sites, as reported in participants' 30-day daily diaries. These side effects were usually mild (causing little discomfort and no effect on daily activities) or moderate (causing some discomfort and effect on daily activities) in severity. Most of these side effects went away on their own within two weeks.
